#### **DETAILED ACTION**

### Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. The abstract of the disclosure is objected to because the words "are disclosed" and "The inventive" should be removed for not complying with the language requirements. Correction is required. See MPEP § 608.01(b).

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,537,942 to Wickstrom in view of U.S. Patent No. 5,269,237 to Baker et al.

The Wickstrom '942 patent discloses a furrow opener having a seed boot (24) operable to insert seed into a furrow and a fertilizer injector wing (28) fixed to the seed boot and operable to form a fertilizer bed and inject fertilizer therein. The fertilizer injector wing is positioned

adjacent the seed boot and includes an outboard portion (34) positioned below the outboard side of the seed boot and angling away therefrom. What the Wickstrom '942 patent does not disclose is that a rotatable disc creates the seed furrow. Instead, the Wickstrom '942 patent forms the seed furrow by a knife-like leading edge. However, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the furrow opener of the Wickstrom '942 patent with a rotatable disc furrow opener as taught by the Baker '237 patent as an alternative method of opening a seed furrow. Ordinary artisans would readily recognize that disc furrow openers and knife-type furrow openers perform the same function, and replacing one with the other would be obvious.

Although the Wickstrom '942 patent does not disclose the type of fertilizer used, it would have been obvious to inject anhydrous ammonia using the Wickstrom device, since anhydrous ammonia is a commonly used fertilizer for sidedressing crops.

The outboard portion of the fertilizer injector wing is angled outward at an angle between 5 and 30 degrees (col. 2, lines 41-43 - 10-40 degrees).

Regarding claims 15-24: The method as claimed would be obvious as the normal and logical manner in which a furrow opener combining the teachings of the Wickstrom and Baker patents would be used.

Regarding claim 26: In light of the general disclosure of the Wickstrom '942 patent, it would be obvious to provide additional orifices for the injection of fertilizer.

Art Unit: 3671

#### Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nathan Mammen whose telephone number is (703) 306-5959. The examiner can normally be reached Monday through Thursday from 6:30 a.m. to 5:00 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas B. Will, can be reached at (703) 308-3870. The fax number for this Group is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 305-1113.
